Testing automated captions

This is a test of the automated caption code.

Figure 1: Adult fish diversity in the Mid-Atlantic Bight, based on expected number of species in a standard number of individuals. Results from survey vessels Albatross (red) and Bigelow (blue) are reported separately due to catchability differences. A long-term significant decrease is present in the Bigelow time series (purple).

Plot Summary (2 datasets, Region: MidAtlantic): Data timeframes vary across series.

- MAB - Albatross (Most recent year: 2008, near average): No statistically significant long-term trend was detected (ar1, $p = 0.486$). No statistically significant short-term trend was detected over the last 10 years ($p = 0.268$).
- MAB - Bigelow (Most recent year: 2025, below average): Long-term trends were not evaluated (< 30 years of data). No statistically significant short-term trend was detected over the last 15 years ($p = 0.184$).
